

## Straight Talks, our four-part Automotive and Mobility podcast series

### **01 May 2018**

The autonomous vehicle revolution has introduced an exciting array of innovations into the automobile industry. Our automotive team explores how groundbreaking technology is changing the pace of business and regulation to shape the future of mobility.

In this podcast episode, Michael Kidney and Sebastian Polly, both product liability partners at Hogan Lovells, expose little-known facts about the challenges that programmers, engineers, and operators face in this new autonomous driving world.

In this podcast episode, Tim Tobin and Winston Maxwell, partners at Hogan Lovells, discuss how cybersecurity, data privacy, and ownership concerns are influencing the development of connected and autonomous vehicles.

In this podcast episode, Celine Crowson and Dr. Martin Fährdrich, partners at Hogan Lovells, discuss the unprecedented disruptions under way in the automotive industry, and why OEMs want policymakers to let autonomous vehicle technologies influence future regulations — not the other way around.

In the final installment of our autonomous and connected vehicles podcast series, Hogan Lovells Partner Patrick Ayad and Senior Counsel Lance Bultena discuss how autonomous vehicles are challenging decades of regulations and shaping perspectives around the world.
